

## **The NeuroDev project will create three neurodevelopment centres in Palestine**

24/10/2024

NeuroDev is an Erasmus+ project coordinated from the University of Granada by researchers from CIMCYC and the Faculty of Education Sciences. This project is a continuation of the NeuCaRe project through which the first master's degree in child neurodevelopment and clinical neuropsychology in Arab countries was designed and implemented. This master's degree is now in its third edition.

Co-funded by the  
Erasmus+ Programme  
of the European Union

The new project aims to continue the previous project and will create three Neurodevelopment centres in the cities of Hebron, Bethlehem and Nablus. Three main types of activities will be carried out in these centres: 1) clinical training for the students of the master's degree; 2) research into neurodevelopmental problems and 3) Child Neuropsychology services for the community.

In addition to the three Palestinian universities and the University of Granada, the University of Clermont-Ferrand will also participate in the project.

The ultimate goals of this project are twofold. On the one hand, to help the Palestinian people by training Palestinian professionals and providing the infrastructure for the aid to materialise. On the other hand, to continue with the transfer activities that are being carried out from the CIMCYC.

For further information, please contact Miguel Pérez García (mperezg@ugr.es), coordinator at the UGR.
